WHEEL GUIDES

TECHNICAL DESCRIPTION

Galvanized wheel guides mounted on the front of the loading area of Tekram Loading Unloading-Equipments increase the safety of the approaching vehicles and prevent them from being damaged. Wheel Guides allow the vehicle to approach the loading area centrally and straight. In this way, the ramp lip is positioned in the middle with respect to the floor of the vehicle and the shelter provides proper insulation relative to the vehicle. It also extends the life of dock shelters by reducing the pressure caused by vehicles or off-centre. The Tekram Wheel Guides extended insert causes less damage to vehicle tires than the sharp edges usually found in concrete guides.

TECHNICAL SPECIFICATION

1-LENGTH : 2620 mm

2-HEIGHT : 260 mm

3-DIAMETER : 140 mm

4-THICKNESS : 3 mm

5-GUIDE MATERIAL : Hot dipped galvanized steel
